

## **Bloodborne Pathogens Quiz**

1. True    False    Hepatitis B is a bigger threat to you and HIV because it is more common.
2. True    False    People can be contagious with either HIV, HBV, or HCV for years while looking and feeling healthy.
3. True    False    The two most common ways that a person gets HIV, HBV, or HCV are by having sex with an infected person or by sharing needles.
4. True    False    You cannot get HIV, HBV, or HCV by working alongside someone who is infected or by touching, social kissing, coughing, or sneezing.
5. True    False    HIV is a fragile virus that cannot survive away from a person's body fluids unless it is kept under controlled laboratory conditions.
6. True    False    HBV can survive on environmental surfaces, dried and at room temperature, for at least one week.
7. True    False    You can reuse disposable gloves if they are not visibly contaminated with blood.
8. True    False    In the workplace, discard potentially infectious materials in the usual trash containers.
9. True    False    When an accident occurs on the job, you should help the victim first and then protect yourself from exposure.
10. True    False    Whenever possible, attend to your own minor injuries and clean up after yourself.

### **Acknowledgement of Training**

I have seen and understand the PowerPoint training, "Bloodborne Pathogens" I have also completed and passed the comprehensive quiz at the conclusion.
